

CD229 CAR-T protocol: nine simulation scenarios  
10,000 trials per scenario and method | target 0.30 | N <= 18 | cohort 3 | cutoff 0.90 at all doses

Independent implementations; not official MD Anderson simulation outputs. Error bars: +/- 1.96 MCSE.  
BOLD-exp: constant tau 0.49 only. Prior means 0.30, PESS 3. Scenario 8 excluded.  
S5: highest-dose convention. S9: any target dose. S10: any available dose, not unique-MTD accuracy.
